

Maintenance of Mixing and Dosing Heads at HÜBERS. Because your production department has better things to do.

Production efficiency depends wholly on the availability of the required equipment. Therefore, it is important to reduce setup and maintenance times as well as extend maintenance intervals.

Our service department offers the perfect solution for the maintenance of your mixing and dosing heads: Expert maintenance on demand. This minimizes maintenance outlay while simultaneously maximizing quality.

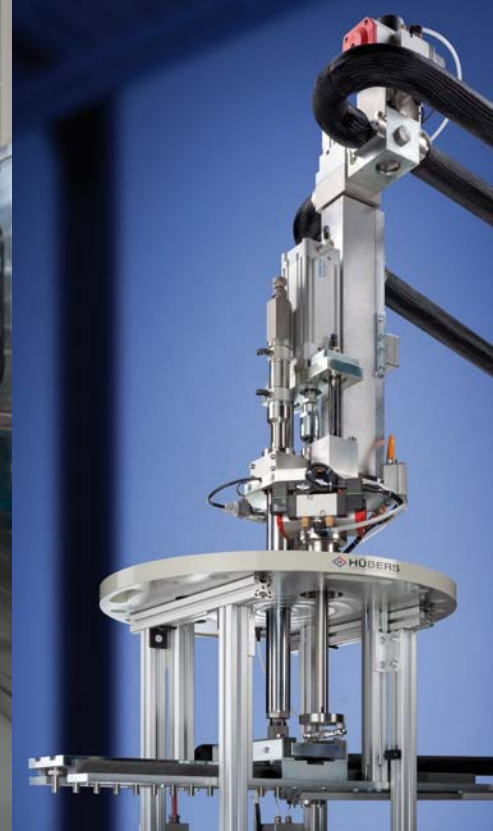

Aim: Zero Maintenance

The optimization of your mixing and dosing heads is always in mind during maintenance. Through constant breakdown analysis, we have developed effective solutions and thereby achieve a considerable extension of service intervals.

Furthermore, with our continuous technological improvement of machine elements, we can offer a repowering of your mixing and dosing heads – up to zero maintenance where possible.

Take advantage of our expert know-how in machine operations!

Targeted Maintenance instead of Down-times

Our maintenance service:

- high-performance ultrasonic cleaning of all functional elements
- replacement of all sealing and wearable parts (soft components)
- operating test
- failure analysis
- service interval extendability analysis
- maintenance documentation and reporting
- extra service on demand e.g. repair or replacement of hard components.

The advantages for your production:

- internal maintenance is reduced to the removal and shipping of the mixing and dosing heads
- reduction of labor costs
- no stockpiling of sealing and wearable parts
- no cleaning facility necessary
- no storage and disposal of hazardous cleaning agents

We simplify processes for you:

- notify us about the upcoming maintenance – we provide you with a standardized data sheet for documentation
- send us the heads – on request we provide a customized transport box for each particular head thus reducing shipping issues
- after maintenance we return the parts ready for re-installation
